

Hands-on Exercise No. 2
DigiSkills 3.0 Batch-03
Data Analytics and Business Intelligence

Total Marks: 10
Due Date: 14/05/2026

Instructions:

Please read the following instructions carefully before submitting this Hands-on Exercise:

- Use MS Word to prepare exercise solution.
- You may consult tutorials and videos if the concept is not clear.
- Your submitted exercise will not be considered/counted if:
 - It is submitted after due date.
 - It is not in the required format (.doc or .docx)
 - It does not open, or file is corrupt.
 - It is copied (partial or full) from any source (websites, forums, students, etc.)

Learning Outcome:

After completing this exercise, you shall be able to:

- Use Power Query Editor's to identify and remove empty and duplicate rows from a dataset to ensure data quality and accuracy.
- Apply text transformation techniques (capitalization, splitting, merging) to standardize and restructure data for better readability and analysis.
- Use transformation tools including Split Column, Merge Column, and Format options to clean real-world messy data.

Problem Statement

Note: The hands-on exercises are linked to each other, to complete this exercise, use the completed data file of your Hands-on Exercise 1. Therefore, to complete Hands-on Exercises 2, 3, and 4, it is necessary to complete the previous hands-on exercises first."

Scenario: You are a Data Analyst for a retail company. The company has exported sales data. However, the data is full of inconsistencies, errors, and missing values. Before any analysis or dashboard can be built, you must perform data cleaning operations.

Objective: To clean and transform a raw, messy dataset into a structured, analysis-ready format using Power Query Editor in Power BI.

Question 1: You notice that the dataset contains several completely empty rows with no values in any column. These rows will cause errors in calculations and reports.

Task: Remove all empty rows from the dataset using Power Query Editor. (2-Marks)

Question 2: After removing empty rows, you find that some transactions have been accidentally entered twice in the dataset (identical values across all columns).

Task: Identify and remove duplicate rows so that each transaction appears only once. (2-Marks)

Question 3: The Customer Name column contains names in inconsistent formats. For example: mike williams (all lowercase)

Task: Convert all customer names to Proper Case using the options in Power Query Editor. (2-Marks)

Question 4: Your dataset has three separate columns for order date:

Task: Merge the Day, Month, and Year columns into a single column named Order Date. Use a hyphen - as the separator between values. (2-Marks)

Question 5: The dataset contains a column named Country-State-City that combines Country, State, and City information using hyphens as separators. For example: United States-Kentucky-Henderson

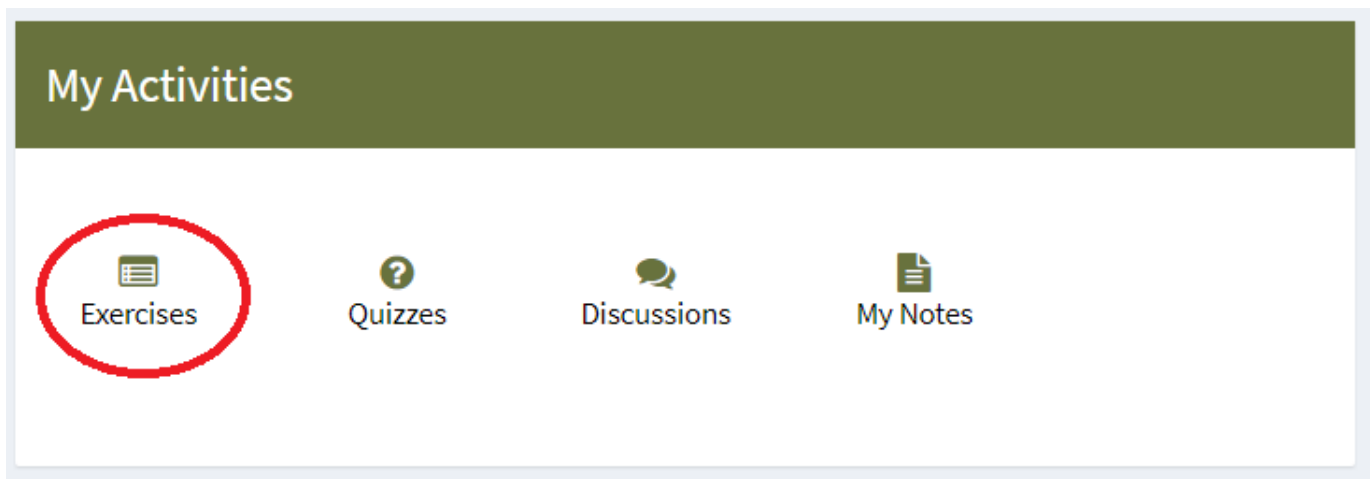

Task: Split the column into three separate columns named: Country, State, and City. (2-Marks)

BEST OF LUCK ☺

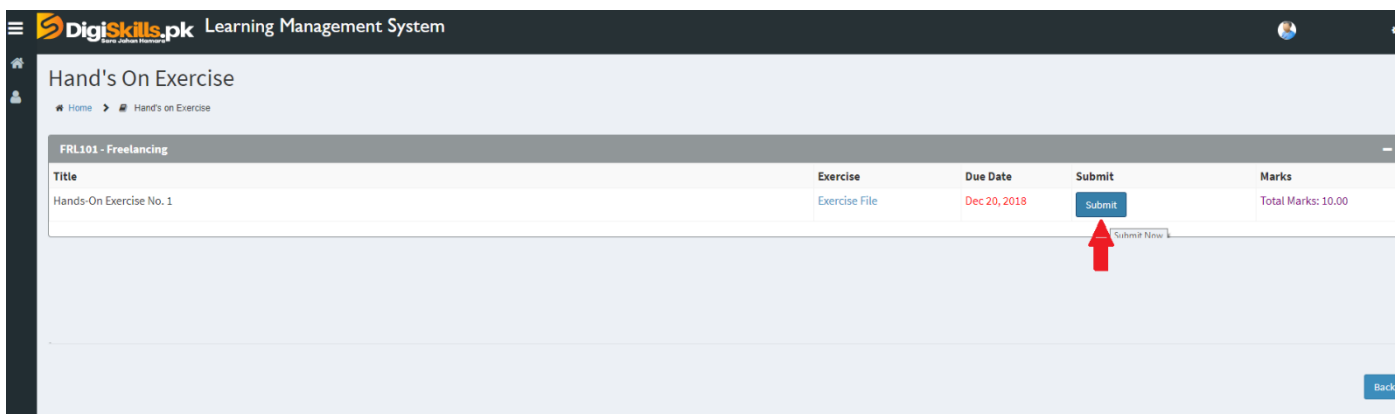

How to submit solution file on LMS?

Please perform the following steps for submitting your solution using LMS:

- 1) Login to the LMS
- 2) Click on the **Exercises** button within the **My Activities** section

- 3) Click on the submit button to upload your Solution.

- 4) Keep in mind to upload your Solution in .doc or .docx format
